Proof of code review

Below you can find proof of a peer code review performed on the work of Antonio and Dimitar they for our group project.

They have been working on fixing some bugs and issues that we came across the previous sprint.

This will be presented in the form of a screenshot that includes the comments I made on the code I reviewed.

The screenshot displays a GitLab merge request for the project 'S3-G3-FeedbackApp'. The title of the merge request is 'Fix bugs on frontend and backend regarding post managing'. The interface includes a sidebar on the left with navigation options like 'Project information', 'Repository', 'Issues', 'Merge requests', 'CI/CD', 'Security & Compliance', 'Deployments', 'Monitor', 'Infrastructure', 'Packages & Registries', 'Analytics', 'Wiki', 'Snippets', and 'Settings'. The main content area shows the 'Overview' tab with a list of tasks: 'fix post to review list', 'fix get available users for edit post', 'fix assigned users in edit post', 'fix loading experienced when creating and updating a post followed by redirection to Home page', and 'show username in drop-down user icon in the navbar'. Below this, there is a 'Request to merge' section indicating the source branch is 3 commits behind the target branch. A 'Pipeline' section shows a successful build. The 'Merge' section indicates that the merge is blocked due to conflicts. The 'Comments' section shows a review by 'Hormes.Maarten M.S.' with a detailed comment praising the code structure and adherence to principles. The right sidebar contains metadata such as 'Assignee', 'Reviewer', 'Milestone', 'Time tracking', 'Labels', 'Lock merge request', 'Participants', 'Notifications', and 'Reference'.

Fix bugs on frontend and backend regarding post managing

Overview | Commits | Pipelines | Changes

- fix post to review list
- fix get available users for edit post
- fix assigned users in edit post
- fix loading experienced when creating and updating a post followed by redirection to Home page
- show username in drop-down user icon in the navbar

Request to merge task-56-57 into development
The source branch is 3 commits behind the target branch

Pipeline #102973 passed for 8130c38a on task-56-57 1 week ago

Review **Approved by you**

Merge Merge blocked: merge conflicts must be resolved. [Resolve conflicts](#) [Merge locally](#)

The code is structured in a readable and clear way. It seems to adhere to the code principles we discussed with the team. For the back-end they changed the way we treat the reviewers and users of our application. These changes could be accompanied with some comments to make clear why and what changed. The code it self looks good! In the FE they added some authentication filters. Looks good and nice addition to the UX and security of the app. Nice changes on the variable naming to make it more clear!
